

1) Master

`sudo su -`

`sudo amazon-linux-extras install ansible2-y`

`vi /etc/ansible/hosts` → we add private IP address of node instances
↓

`vi /etc/ansible/ansible.cfg` → here we should remove # for
below line

Uncomment ansible

password ansible

i) inventory

ii) sudo-user

`visudo`

`vi /etc/ssh/sshd-config`

→ Under allow root to run any
command type

now ~~we have to~~ in
password authentication

remove no & type Yes

Ansible ALL=(ALL) NOPASSWD:ALL

2) Nodes

`sudo su -`
uncomment ansible

password ansible

`visudo`

`vi /etc/ssh/sshd-config`

3) All servers

`sudo systemctl restart sshd`

`sudo systemctl status sshd`

login as ansible user

`su - ansible`

4) Ansible

ssh - keygen

ssh - copy - id ansible@^{localhost}~~public ip of node~~

ssh 'ansible@localhost'

To connect to nodes

ssh - copy - id ansible@public ip of node

or

ssh private ip address
